

Specifications for Progress Equipment Application to control Sales Orders and record additional data.

Introduction:

Due to limitations within Triumph to record and search for additional information for sales orders / invoices, a custom requirement is needed to perform these functions.

This is an initial and rough specification based on initial conversations and assumptions.

Features:

- Entries are created by selecting an existing Triumph Order/Invoice.
- Entries are stored in an Invoice style format with header and details.
- New fields (to be determined) will be provided for, where information can be added in the header and within the details of the Order/Invoice.
- Searching facilities/reports will be provided to allow quick access to data.
- Fields include Lot Numbers and others to be advised.
- Multiple Lot Numbers to be provided for, for each detail item
- Packing Slips can be printed from the program.
- ... to be continued ...
